2026**

01 Executive Summary

The company, in one page.

Syltra SMART is a global smart-technology company engineering the connected home, building and city of the future — one ecosystem, one intelligence layer, one design language.

Founded in 2023 and headquartered in Riyadh, the company was built to solve a problem the smart-home industry created for itself: brilliant individual devices, and a broken experience around them — competing standards, fragmented apps, hubs that never spoke to one another. Syltra's answer is a single vertically-integrated system: hardware, connectivity, cloud, mobile app and on-device AI, designed together rather than bolted together.

The company enters global launch in 2026 across Saudi Arabia and the GCC, with a portfolio spanning six hardware categories and native support for every major smart-home connectivity standard. This document is the single reference for how the business is structured, how the ecosystem is architected, and how the brand is expressed — intended for internal alignment, partners, distributors and investors.

2030

Target: 1M+ connected spaces

MISSION

To engineer the most seamless, secure and intelligent connected-living ecosystem on Earth — and to make it accessible to every home and enterprise, everywhere.

VISION

A world where every space — home, hotel, hospital or headquarters — is intelligent by default. Where technology disappears into the architecture, and comfort, security and efficiency simply happen.

02 Brand DNA

What Syltra is, and what it stands for.

Syltra was built to end fragmentation — one ecosystem, one intelligence layer, one design language, engineered from the silicon up to work as a single seamless system.

01 Excellence

We ship nothing we would not put in our own homes.

03 Security

Privacy and protection are engineered in, never bolted on.

05 Trust

Every device, every time, without exception.

02 Innovation

We build ahead of the standard, not behind it.

04 Simplicity

Power should feel effortless.

06 Sustainability

Designed to last, built to matter.

03 Chairman's Message & Story

Why the company exists.

“

Every industry reaches a point where convenience is no longer enough — where intelligence becomes the standard. Syltra SMART was built for that moment. We did not set out to make another smart plug or another app. We set out to build the operating layer for how homes, businesses and cities will run for the next fifty years — quietly, securely and beautifully. From Riyadh to the world, our mission is simple: give every space the intelligence to take care of itself, and give every person back the time technology was always meant to create.

Anas Elimam

Founder & Chairman, Syltra SMART

Syltra SMART began with a simple frustration: the smart home industry had built brilliant devices and a broken experience — dozens of apps, competing standards, hubs that never spoke to one another.

We started Syltra to end that fragmentation. One ecosystem. One intelligence layer. One design language — engineered from the silicon up to work as a single, seamless system.

What began as a small engineering team in Riyadh is now building the infrastructure for smart living across the Gulf, Europe and beyond.

04 Business Model & Markets

How the company is structured to operate — and who it serves.

Revenue is architected in layers, mirroring the ecosystem itself: a hardware layer that gets a space online, and a platform layer that keeps it intelligent.

HARDWARE

Device Portfolio

Six product categories — hubs & panels, touch switches, smart modules, security, sensors, and comfort & living — sold direct and through distribution partners.

PLATFORM

Syltra OS, Cloud & App

The recurring software layer: cloud infrastructure, the mobile application, automation engine and on-device AI that every hardware sale connects into.

ENTERPRISE & PROJECTS

Commercial & Institutional

Integration, deployment and support for hotels, hospitals, schools, government and industrial properties at scale.

DISTRIBUTION

Channel & Regional Partners

Installer, integrator and distributor network as the primary vehicle for regional and international expansion.

Industries Served

Residential

Commercial

Hotels

Hospitals

Schools

Government

Industrial

05 Global Expansion Roadmap

From Riyadh to the world.

2026 Global launch — Saudi Arabia & GCC, Syltra OS 1.0.

2027 Wider MENA expansion, Syltra AI 2.0.

2028 Europe entry, industrial & enterprise product line.

2029 North America market entry.

2030 Global network — 1M+ connected spaces worldwide.

Operating Structure

Below the Founder & Chairman, the company organizes around five functional pillars that mirror the ecosystem it ships: Product & Hardware Engineering, AI & Platform Engineering, Design & Brand, Commercial & Partnerships, and Operations & Supply Chain — each accountable for one layer of the same system rather than siloed product lines.

06 Ecosystem Architecture

Eight pillars. One system.

Every layer is engineered to move together, not as separate products bolted into one app.

Smart Home

Every room, device and routine in one system.

IoT

Thousands of connected points, one unified network.

Mobile Application

One app. Every device. Every room.

Security

End-to-end encryption, on-device and in the cloud.

Artificial Intelligence

Predictive intelligence that adapts to how you live.

Cloud Platform

Global infrastructure for real-time, secure control.

Automation

Scenes and routines that run themselves.

Connectivity

Matter, Z-Wave, Zigbee, Wi-Fi, BLE and Thread — natively.

Why Syltra

REASON	WHAT IT MEANS
One Ecosystem	Every device, one intelligence layer — no fragmented apps.
Open by Design	Native Matter, Z-Wave, Zigbee, Thread and Home Assistant.
AI-Native	Automation that learns your space, not just reacts to it.
Enterprise-Grade	Residential comfort, industrial-grade reliability.
Built for Longevity	Premium materials, decade-long software support.

07 Connectivity & Performance

Six protocols. One standard.

Every Syltra device speaks the same language, natively – no bridges, no walled gardens.

Matter

The unifying smart-home standard, certified across the full portfolio.

Z-Wave

Low-power mesh built for reliability at scale, across large properties.

Zigbee

A dense mesh purpose-built for sensors and battery-powered devices.

Wi-Fi

High-bandwidth connectivity for cameras, displays and speakers.

Bluetooth LE

Ultra-low-energy proximity connectivity for locks and mobile pairing.

Thread

A self-healing IPv6 mesh giving every sensor a resilient path to the cloud.

<10ms

Local response latency

256-bit

End-to-end encryption

6

Native connectivity protocols

10,000+

Devices supported per hub

08 Product Portfolio Map

One design language, across every room.

Hubs & Panels

The brain of the system, and the glass you touch to run it.

Hub Mini

Hub Pro

Hub Max

Touch Panel 3"

Touch Panel 11"

Touch Switches

Glass-front switches that replace the wall switch, not just automate it.

T1

09 Security & Intelligence Layer

Privacy engineered in, not bolted on.

Syltra's AI runs where the data is created wherever possible — on the device — rather than defaulting every decision to a remote cloud.

On-device AI. Syltra Cam recognizes people, vehicles and packages locally; footage only leaves the home if the household chooses to share it. This same principle — process locally, sync only what's needed — extends across the ecosystem's automation engine.

Local-first control. Hub Pro embeds Home Assistant so that automations keep running even if the internet connection doesn't — the system degrades gracefully instead of failing outright.

End-to-end encryption. Every device, on-device and in the cloud, is covered by 256-bit encryption as a baseline, not an add-on tier.

Scale. A single Hub Max coordinates 1,000+ devices across multiple buildings from one interface — the same architecture used for a single apartment, scaled for an estate, hotel or campus.

10 Brand Identity Snapshot

The mark, and what it carries.

POSITIONING

A global smart-technology company engineering the connected home, building and city of the future.

TAGLINE

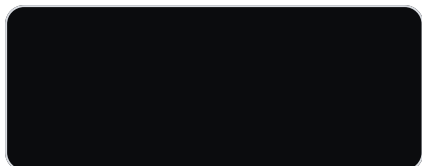

Smart Living. Seamlessly Connected.

TONE OF VOICE

Precise, confident, unhurried. States what the system does rather than selling a feeling — the same restraint the hardware itself is designed with.
